

IN THE ABSTRACT

Please insert the following abstract:

--A disposable tissue is formed from a rayon non-woven and compressed into a predetermined shape using an apparatus that includes a cylindrical molding bushing having a longitudinal through passage, a table for supporting the molding bushing such that both end portions of the through passage of the molding bushing are exposed to the outside, an upper press installed vertically movably above the table and having a pressing rod to be inserted into the through passage of the molding bushing when the upper press moves downwardly, and a lower press installed vertically movable below the table and having a support rod to be inserted into the through passage of the molding bushing when the lower press moves upwardly.--
